

TIRE TOOL INSTRUCTION SHEET

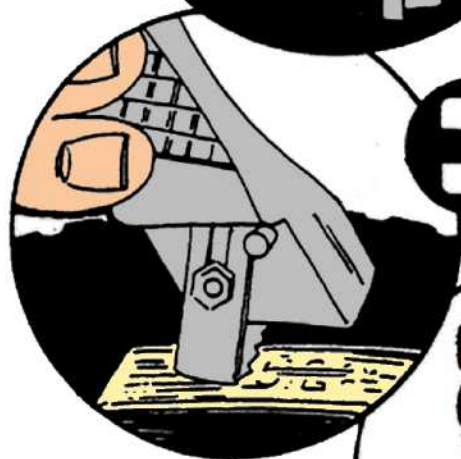

How to use the Tire Tool

1

WHAT TO DO FIRST

Be sure to practice on some junk tires first. Cut tires at room temperature.

2

HOLDING THE TIRE TOOL

Grip the tool comfortably (as illustrated) in the palm of your hand with your thumb pressed firmly against the back of the tool.

3

TO DEFACE A SERIAL NUMBER

Scrape blade lightly over serial number until the number is no longer readable.

4

TO LIFT A SERIAL NUMBER RIGHT OFF THE TIRE

Lifting serial numbers is easy after a little practice. Place tip of tool in line with serial number. Lean tool away from yourself. Begin cutting by putting downward pressure on the blade while pulling towards yourself. When cut is long enough free the tool & serial number strip by pulling up & cutting off.

5

RECORD KEEPING

A serial number that has been lifted from a tire may be used for record keeping purposes.
